

The purpose of the Little Juniata River Association (LJRA) is to “Monitor, preserve and improve the Little Juniata River and its tributaries as a cold water resource.” To further these objectives, the LJRA and its members:

- Periodically assess the biological integrity of aquatic macro-invertebrates inhabiting the river and its tributaries.
- Monitor critical water-quality parameters, including temperature, oxygen content, ph, phosphorous, and nitrates.
- Consult and work with individuals; local state and federal government representatives and college and university scientists, as appropriate, to further the purposes and goals of the LJRA.
- Form alliances with other organizations such as sportsmen’s groups, landowners and land trust organizations.
- Inform the public and government agencies of threats to the “j” and its tributaries.
- Inform the public and government of opportunities for improvement of the “j” and its tributaries.
- Promote and develop public-access locations for users of the Little Juniata River.
- Press for upgrades in Designated Use for the entire watershed to “High Quality Cold Water”

LJRA accomplishments...

- ✓ Identified 8 significant bank erosion sites. Totally repaired and created fish habit on all 8 sites, 1400 feet of bank and 28,000 sq ft of riparian buffer.
- ✓ Initiated a Public Fishing Easement Program with PFBC. More than \$200,000 paid for 4 miles of permanent public fishing on the “j”, more to come.
- ✓ Petitioned the PF&BC for a change in regulations to “Catch and Release All - Tackle.” Gave public testimony to the PF&BC commissioners resulting in enactment of this no-kill policy.
- ✓ Organize and execute annual riverbank cleanups. Over 20 miles of river bank cleaned every spring for 13 years. Over 200 participants each year.
- ✓ Requested that the PF&BC survey and reclassify important unclassified “j” tributaries.
- ✓ Sandy Run and Kettle Creek , were subsequently added to the list of Class A trout water and given HQCW status.
- ✓ Asked for and received a study of the existence of wild trout vs hatchery fingerlings. Resulted in “Class A status” for 13 miles and elimination of hatchery stockings.

- Yes, I want to become a member of the *Little Juniata River Association...*
